MAIN FEATURES

NUMBER OF INDUSTRIAL DISPUTES AND WORKING DAYS LOST, AUSTRALIA

During 1984 working days lost in industrial disputes continued to decline with the 1.3 million working days lost being the lowest for any year since 1968 when 1.1 million working days were lost. All States and Territories except Queensland and the Australian Capital Territory recorded fewer working days lost in 1984 compared to 1983.

The number of working days lost per thousand employees, which exclude details relating to agricultural employees and private household staff, increased in New South Wales and Queensland and decreased in the other States. The figure for Australia of 245 was the lowest annual figure since 1967 when 176 working days were lost per thousand employees. The largest industry variations between 1983 and 1984 were in construction, where the number of working days lost per

thousand employees fell from 1,269 to 427 and in coal mining which rose from 3,223 to 3,543. The mining industry continued to record a much higher level of working days lost per thousand employees than other industries.

The major causes of disputes which ended in 1984 were managerial policy and wages which accounted for 32.5 per cent and 24.6 per cent respectively of total working days lost.

Disputes in which less than 500 working days were lost accounted for 82.6 per cent of total disputes but only 14.2 per cent of total working days lost while 2.0 per cent of total disputes, each involving 5,000 or more working days lost, accounted for 52.4 per cent of total working days lost. There were only 15 disputes in which 10,000 or more working days were lost in 1984.

EXPLANATORY NOTES

Introduction

This publication contains annual statistics of industrial disputes. Monthly figures for the period have previously been published in less detail in the monthly *Industrial Disputes, Australia* (6321.0).

2. The annual statistics of industrial disputes in Tables 7 to 13 refer to disputes which *ended* in the year, irrespective of when they commenced. The statistics include any workers involved and any working days lost in previous years as well as in the current year. They may therefore differ from annual figures in Tables 1 to 6 which refer to all disputes that *started* or were *in progress* during the year, irrespective of whether they had ended during the year or continued into the next year and which cover only those workers involved and those working days lost *during the current year*.

3. The statistics of industrial disputes for 1984 are compiled according to the Australian Standard Industrial Classification (ASIC), described in *Australian Standard Industrial Classification, 1983 Edition, Vol. 1* (1201.0). For the period 1980 to 1983 the statistics were compiled according to the descriptions contained in the 1978 edition. Prior to 1980 the statistics were compiled on the basis of the Preliminary Edition, 1969.

Coverage

4. The statistics relate only to disputes involving stoppages of work of ten man-days or more *at the establishments where the stoppages occurred*.

5. The figures of working days lost relate to the losses due to industrial disputes (as defined in paragraph 8) and not to aggregate losses for the economy as a whole. For example, effects on other establishments, such as stand-downs because of lack of materials, disruption of transport services, power cuts, etc. are not measured by these figures. Also, some workers involved in industrial disputes may obtain work at other establishments while a dispute is in progress. It is also possible that some or all of the total man-days lost in any particular dispute may be made up through working longer hours or increasing the work force at other establishments, or at the establishments involved in the dispute after work has resumed.

6. Reports of stoppages of work are obtained from (a) employers and trade unions, (b) government departments and authorities, (c) State and Federal industrial arbitration authorities, and (d) trade journals, employer and trade union publications and newspapers. The statistics of industrial disputes are compiled mainly from data obtained from employers (both private and government) and trade unions concerning individual disputes and from reports of government authorities. Particulars of some stoppages (for example, those involving a large number of establishments) may have been estimated and the statistics therefore should be regarded as giving only a broad measure of the extent of industrial disputes (as defined).

7. Stoppages of work occurring at different times and at different establishments, but due to the same cause, may be regarded as one industrial dispute. However, an industrial dispute occurring in more than one State or Territory is counted as a separate dispute in each State or Territory and in the total for Australia. A dispute involving workers in more than one industry in a State or Territory is counted only once in the number of disputes in the industry that has the largest number of workers involved; but workers involved and working days lost are allocated to their respective industries.

Definitions

8. For these statistics an *industrial dispute* is defined as a withdrawal from work by a group of employees or a refusal by an employer or a number of employers to permit some or all of their employees to work, each withdrawal or refusal being made in order to enforce a demand, to resist a demand, or to express a grievance. Stoppages of work not directly connected with terms and conditions of employment (e.g. political matters, fining and gaoling of persons) are included in the statistics.

9. *Workers directly and indirectly involved* refer to wage and salary earners only. Excluded are persons who are self-employed (e.g. building sub-contractors, owner-drivers of trucks) and employers.

10. *Workers directly involved* are those who actually participated in the dispute in order to enforce or resist a demand or to express a grievance.

11. *Workers indirectly involved* are those thrown out of work at the establishments where the stoppages occurred, but who are not themselves parties to the dispute. Workers thrown out of work at establishments other than those where the stoppages occurred are excluded. (See paragraph 5.)

12. *Total workers involved* for any period of time are obtained by adding together the number of workers involved in each dispute in the period. For any period of time the figures may include details of the same workers involved in more than one dispute. The longer the period of reference the more chance there is of some double counting in the number of workers involved. Where there are varying numbers of employees involved during the progress of a dispute the figures of workers involved included in the statistics relate to the largest number of individual workers involved on any one day. Generally, the *total* number of workers involved for each year will equal the sum of the *total* number of workers involved in the first month of a year plus the number of workers *newly* involved in subsequent months (as published monthly in Catalogue No. 6321.0). Differences between monthly and annual aggregates can occur due to temporary cessations in the first month of the year of stoppages resuming in subsequent months. Workers re-involved in this type of dispute are not classified as workers *newly* involved in stoppages in the second year in which the dispute occurs.

13. *Working days lost* refer to man-days lost by workers directly and indirectly involved in the dispute and figures are generally as reported by parties to the dispute. For some disputes working days lost are estimated on the basis of the number of workers involved and the duration of the dispute.

Causes

14. The statistics of causes of industrial disputes relate to the *causes of stoppages of work*. The statistics therefore do not reflect the relative importance of all causes of disputes between employers and employees. The classification of causes is as follows:

Wages. Claims involving general principles relating to wages (e.g. increase (decrease) in wages; variation in method of payment) or combined claims relating to wages, hours or conditions of work (in which the claim about wages is deemed to be the most important; combined claims in which other claims are deemed to be the most important are included under other causes).

Hours of work. Claims involving general principles relating to hours of work (e.g. decrease (increase) in hours; spread of hours).

Managerial policy. Disputes concerning the managerial policy of employers—computation of wages, hours, leave, etc. in individual cases; docking pay, docking leave credits, fines, etc.; disciplinary matters including dismissals, suspension, victimisation; principles of pro

motion and filling positions, transfers, roster complaints, retrenchment policy; employment of particular persons and personal disagreements; production limitations or quotas; etc.

Physical working conditions. Disputes concerning physical working conditions—safety issues; protective clothing and equipment; first aid services; uncomfortable working conditions, etc.; lack of, or the conditions of, amenities; claims for assistance; shortage or poor distribution of equipment or material; condition of equipment; new production methods and equipment; arduous physical tasks; etc.

Trade unionism. Disputes concerning employment of non-unionists, inter-union and intra-union disputes, sympathy stoppages in support of employees in another industry, recognition of union activities, etc.

Other. Claims involving general principles relating to holiday and leave provisions, pension and retirement provisions, workers' compensation provisions, insertion of penal clause provisions in awards, etc.

Also included are disputes concerning protests directed against persons or situations other than those relating to the employer/employee relationship, i.e. political matters, fining and gaoling of persons, protests against lack of work, and lack of adequate transport; non-award public holidays; accidents and funerals; no reason given for stoppages; etc.

Methods of settlement

15. Statistics of the *method of settlement* of industrial disputes relate to the *method directly responsible for ending the stoppage of work* and not necessarily to the method (or methods) responsible for settling all matters in dispute. For these reasons they do not reflect the relative importance of the work of authorities operating under State and Federal legislation. The classification of methods of settlement is as follows:

Negotiation. Private negotiation between the parties involved, or their representatives, without the intervention or assistance of authorities constituted under State or Federal industrial legislation.

State legislation. Intervention or assistance of an industrial authority or authorities created by or constituted under State conciliation and arbitration or wages board legislation, or reference to such authorities or compulsory or voluntary conference. Intervention, assistance or advice of State government officials or inspectors.

Federal and joint Federal-State legislation. Compulsory or voluntary conference or by intervention or assistance of, or reference to, the industrial tribunals created by or constituted under the following Acts:

Conciliation and Arbitration Act, Coal Industry Acts, Stevedoring Industry Act, Other Acts (Snowy Mountains Hydro-electric Power Act; Navigation Act; and the Public Service Arbitration Act). Intervention, assistance or advice of Federal government officials or inspectors.

Resumption without negotiation. This category may include some disputes which are settled subject to negotiation of a formal nature. Stop-work meetings are included, and this category may also include disputes settled by 'resumption' as stated, but about which no further information is available.

Other methods.

Other ABS publications

16. Users may also wish to refer to the following publications:

Industrial Disputes, Australia (6321.0)—issued monthly

Labour Statistics, Australia, 1983 (6101.0) (\$6.10, \$7.30 incl. postage)

The Labour Force, Australia (6203.0)—issued monthly (\$1.10, \$1.90 incl. postage)

17. Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

PART A : WORKING DAYS LOST PER THOUSAND EMPLOYEES

The figures of working days lost used in these compilations are those lost by workers directly and indirectly involved in disputes involving stoppages of work of ten man-days or more in the establishments where the stoppages occurred. Working days lost in Agriculture, Forestry and Fishing industries and in private households employing staff have been excluded.

2. Estimates have been calculated by using estimates of employees from the Labour Force Survey. Revisions to Labour Force Survey figures as a result of incorporating new benchmarks obtained using data from the 1981 Population Census have resulted in the revised estimates shown for 1979 to 1983.
